Product Name: Taurine

CAS No.: 107-35-7

Cat. No.: HY-B0351

MWt: 125.15

Formula: C2H7NO3S

Purity: >98%

Solubility: Water 20 mg/mL; DMSO <1 mg/mL

Mechanisms:
Pathways: Others; Target: Others

Biological Activity:
Taurine is an organic acid widely distributed in animal tissues. Target: Others
Taurine is a major constituent of bile and can be found in the large intestine and accounts for approximately 0.1% of total human body weight [1]. Taurine is present in high concentration in algae and in the animals including insects and arthropods, but is generally absent or present in traces in the bacterial and plant kingdoms [2]. In cardiac tissue alone, taurine levels of 20 mM or higher may be found. Taurine availability protects against cholestasis induced by monohydroxy bile acids remains confined to guinea pigs [3]. Oral supplementation of taurine results in increased plasma taurine concentrations and is associated with normalization of left ventricular function in both groups of cats. Myocardial concentrations of taurine are directly related to plasma concentrations and low plasma ...
